

Updating ACT Aspire Norms

ACT Aspire started with the goal of reporting three-year rolling norms with equal weights to each student record. These were user norms, with a broad representation across the country. Beginning with fall 2015 reporting, the norm data have been statistically weighted to more closely match a national distribution in terms of selected student demographics and achievement in order to facilitate meaningful comparisons.

This section describes the development of ACT Aspire norms based on tests administered through spring 2015. First, the inclusion rules for the samples are described, followed by a description of a weighting methodology designed to produce nationally representative norms. Then, the updated ACT Aspire norm tables, summary statistics, and demographic information for the weighted samples are presented.

ACT Aspire Norm Samples

For grades 3-8, the norm samples include students who took ACT Aspire on-grade subject tests in 2013 spring, 2014 spring, and 2015 spring, as consistent with the goal to include three years of rolling data.

For grades 9 and 10, the norm samples are restricted to students who took ACT Aspire in consecutive years. The grade 9 samples include students who took grade 8 ACT Aspire and grade 9 ACT Aspire subject tests approximately one year apart. Similarly, the grade 10 samples include students who took ACT Aspire in grade 9 and grade 10 approximately one year apart. As described later, these longitudinal samples are used to anchor the grade 9 and grade 10 norm samples to the grade 8 score distribution. Table 1.1 provides the sample sizes by grade level and subject area.

Table 1.1: Sample Sizes Used for Norm Establishment

Grade level	Subject area				
	English	Mathematics	Reading	Science	Writing
3	102,213	176,117	176,128	73,337	89,557
4	100,592	173,117	173,383	74,618	94,322
5	100,037	172,635	172,437	99,966	93,023
6	98,838	172,865	172,723	72,081	94,949
7	103,297	179,967	179,501	104,468	99,005
8	112,999	190,450	190,086	89,559	107,996
9	3,875	4,149	3,925	3,877	3,364
10	6,436	6,634	6,600	6,172	4,862

Weighting Methodology for ACT Aspire Norms

Students assessed with ACT Aspire are not representative of the national population of U.S. elementary and secondary school students. To support interpretations of *nationally representative* norms, weights are assigned to ACT Aspire-tested samples so that the weighted samples are similar to the national population of U.S. elementary and secondary school students on school affiliation (public vs. private), and race/ethnicity and academic achievement among public school students.

For grades 3-8, the weighting strategy first estimates the population of U.S. elementary and secondary public school students with respect to race/ethnicity and district mean achievement level. Then, the public school ACT Aspire-tested students are weighted to match on these characteristics. Finally, the weighted public school data is combined with the private school data with the final weighting reflecting the frequency of school affiliation (public or private) in the population. An important assumption of this

approach is that a district's mean achievement level can be measured by its mean ACT Composite score¹, and that this measure reflects achievement in the lower grade levels. To examine this assumption, correlations between district mean ACT Composite score and district mean ACT Aspire scores in the lower grade levels are presented below (Table 1.2). For most subject areas and grade levels, district mean ACT Composite score is highly correlated with district mean ACT Aspire score. For Writing, the correlations are less consistent across grade levels and are generally lower. The correlations in Table 1.2 suggest that district mean ACT Composite score reflects achievement in lower grade levels.

Table 1.2: Correlation of District Mean ACT Composite Scores with District Mean ACT Aspire Score

Grade level	Subject area				
	English	Mathematics	Reading	Science	Writing
3	0.69	0.61	0.72	0.52	0.51
4	0.61	0.70	0.74	0.57	0.08
5	0.63	0.69	0.73	0.66	0.59
6	0.74	0.65	0.68	0.58	0.62
7	0.70	0.79	0.66	0.71	0.38
8	0.73	0.81	0.58	0.66	0.26
9	0.79	0.79	0.73	0.72	0.61
10	0.72	0.74	0.66	0.70	0.47

Note: Districts with at least 50 ACT Aspire-tested students are included.

For grade 9, a sample of students tested with ACT Aspire in grades 8 and 9 is used. After the norms are developed for grade 8, the longitudinal samples (one for each subject area) are weighted to match the national grade 8 score distribution. The weighted score distribution of the grade 9 scores are then calculated. For grade 10, the same approach is used, but with the national grade 9 score distribution serving as the anchor.

The weighting procedure for grades 3-8 is described in detail below. In what follows, *target population* refers to the population of U.S. elementary and secondary school students. The following steps were taken to weight each ACT Aspire norming sample²:

- 1) Determine the target population's relative frequency of students enrolled in public and private schools.³
- 2) Among public school students within the target population, determine the relative frequency by race/ethnicity and school percent eligible for free or reduced lunch (school FRL). Table 1.3 shows the categorizations of these variables and relative frequencies in the public school target population⁴.

¹ When a district tests virtually all students with the ACT, as is often done with ACT state and district testing, a district's mean ACT Composite score measures the mean achievement level of the district's graduating students.

² There is one norming sample for each grade level and subject area.

³ Estimated from Market Data Retrieval (MDR) data, the target population includes 90.5% public-school and 9.5% private-school enrollees.

⁴ The public school target population relative frequencies for race/ethnicity and school FRL are derived from the Common Core of Public School Universe Survey Data provided by the National Center for Education Statistics.

- 3) Identify all public school districts that administer the ACT test to all 11th grade students; we refer to ACT-tested students within these districts as the *ACT state and district testing public school sample*. Weight this sample to the public school target population on race/ethnicity and school FRL. Weights are determined by the ratio of the population and sample percentages of each combination of race/ethnicity and school FRL:

$$\text{weight}(\text{Race} = x, \text{FRL} = y) = \frac{\text{Population \%}(\text{Race} = x, \text{FRL} = y)}{\text{Sample \%}(\text{Race} = x, \text{FRL} = y)}$$

We refer to this weighted sample as the *ACT public school population*. The ACT public school population is nearly identical to the public school target population with respect to relative frequencies of race/ethnicity and school FRL groups (Table 1.3).

- 4) For each student in the ACT public school population, determine the mean ACT Composite score within their district. Categorize district mean ACT score⁵ and student race/ethnicity, and calculate the relative frequency of each combination of race/ethnicity and district mean ACT Composite score level (DMACT) within the ACT public school population.
- 5) For each ACT Aspire norm sample, determine public/private school affiliation and, for public school students, race/ethnicity and DMACT. For students enrolled in public schools, calculate the sample percentage for each combination of race/ethnicity and DMACT. Weight the sample to the target population on public/private school affiliation and, for public school students, race/ethnicity and DMACT. Weights are determined by the ratio of the population and sample percentages:

$$\begin{aligned}\text{Public weight}(\text{Race} = x, \text{DMACT} = y) &= \frac{\text{Pop.\% public}}{\text{Sample \% public}} \times \frac{\text{ACT Public Pop.\%}(\text{Race}=x, \text{DMACT}=y)}{\text{Public Sample \%}(\text{Race}=x, \text{DMACT}=y)} \\ \text{Private weight} &= \frac{\text{Pop.\% private}}{\text{Sample \% private}}\end{aligned}$$

For an example norm sample (grade 5 English), the relative frequencies of the weighting variables are provided in Table 1.4 for the target population, the unweighted sample, and the weighted sample. The weighted sample is identical to the target population with respect to school affiliation, and the public school sample is identical to the public school target population on race/ethnicity and district mean ACT Composite score. As shown in Table 1.4, the weighted mean ACT Aspire grade 5 English score is higher than the unweighted mean. This is expected because the unweighted district mean ACT Composite score was lower than the target population's district mean ACT Composite score.

⁵ See Table 1.3 for the categorization of district mean ACT Composite score.

Table 1.3: Target Public School Population and ACT Public School Population

Variable	Population of public U.S. elementary and secondary students	ACT state and district testing public school sample	
		Unweighted	ACT public school population ⁶
Race/ethnicity			
Asian	4.7%	3.3%	4.7%
Black/African American	15.5%	14.6%	15.5%
Hispanic	25.0%	13.1%	25.0%

80-90%	9.5%	3.6%	9.5%
90-100%	10.0%	3.3%	10.0%
Unknown	0.8%	0.5%	0.8%
District mean ACT score			
<17.5		10.1%	16.1%
17.5-18.2		9.2%	9.5%
18.2-18.7		11.3%	15.9%
18.7-19.2		10.3%	9.6%
19.2-19.5		8.6%	7.7%
19.5-20.1		9.9%	8.5%
20.1-20.8		12.4%	9.7%
20.8-21.4		8.3%	6.3%
21.4-22.6		9.3%	7.2%
>22.6		10.6%	9.6%
Mean (SD) district mean ACT score		19.9 (2.5)	19.3 (2.8)
Mean (SD) ACT Composite score		19.9 (5.3)	19.3 (5.3)

Note: Shading represents variables used in weighting.

⁶ ACT state and district testing public school sample weighted to national population of U.S. elementary and secondary students on race/ethnicity and school FRL.

⁷ For the public school target population, the relative frequency for Unknown/Other is obtained by subtracting the sum of the individual race/ethnicity counts from total enrollment counts. For the ACT data, the unknown/other category includes Native Hawaiian/Other Pacific Islander, two or more races, prefer not to respond, and no response.

Table 1.4: One Example of ACT Aspire Norm Sample Weighting: Grade 5 English

Variable	Population of U.S. elementary and secondary students	ACT Aspire norm sample: grade 5 English

Mean (SD) ACT Aspire score		422.3 (7.1)	423.1 (7.1)

Note: Shading represents variables used in weighting.

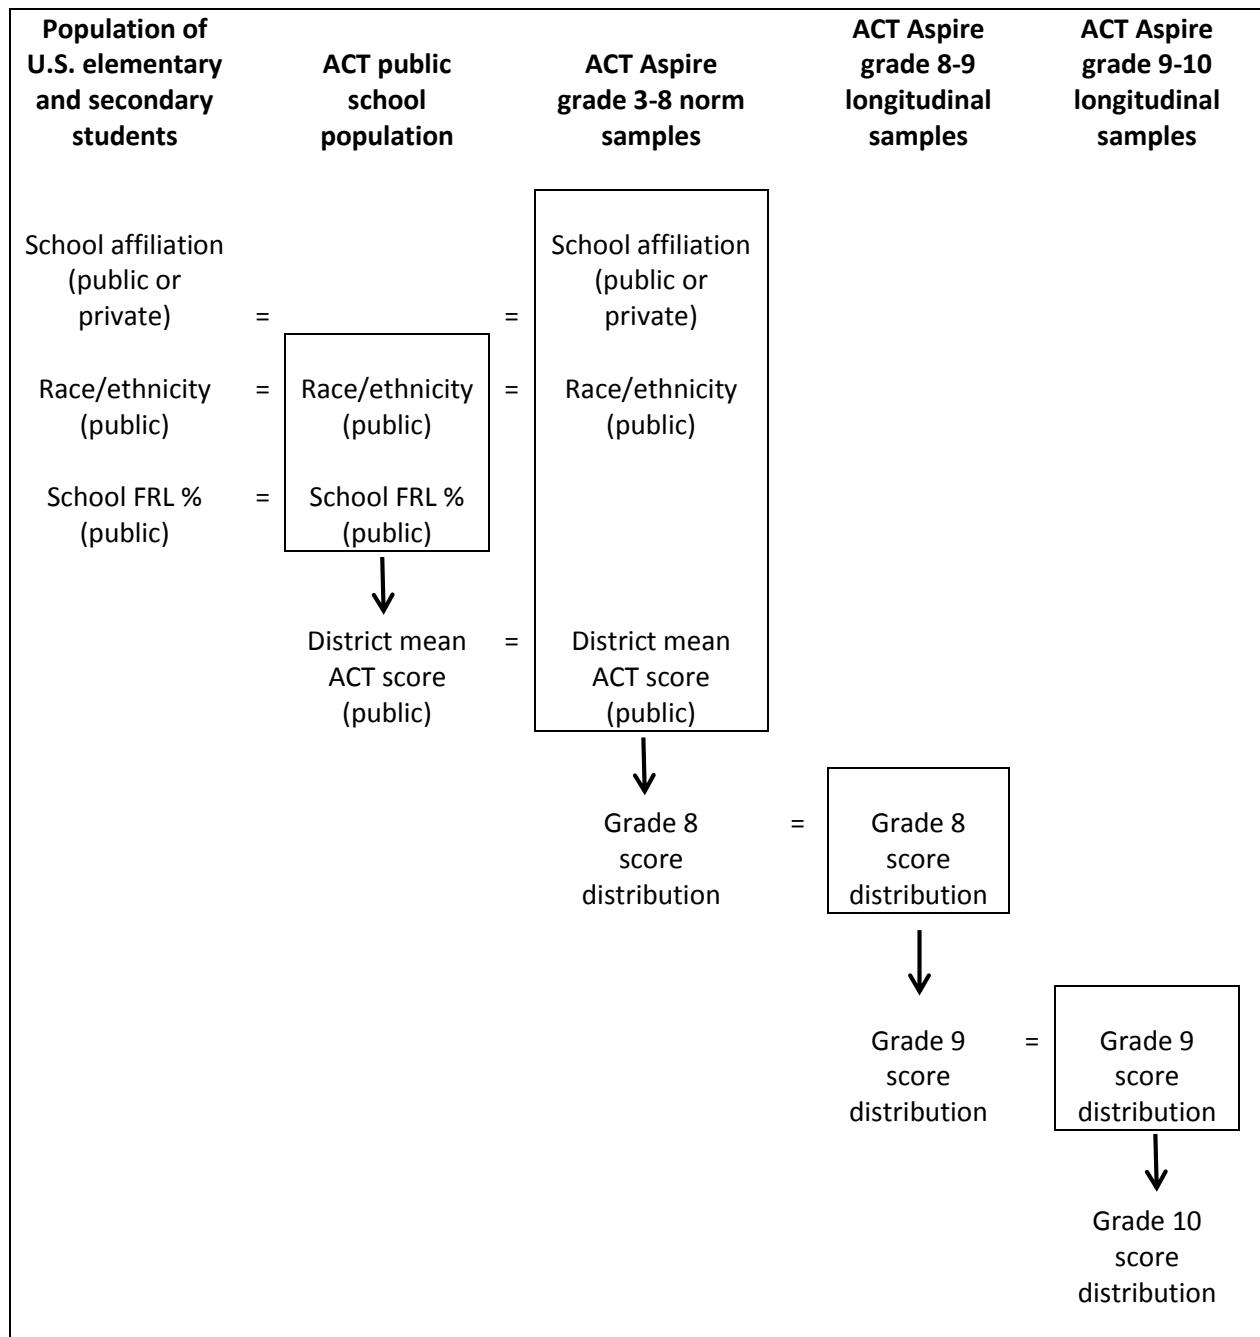

⁸ Frequencies from ACT public school population.

Figure 1.1 summarizes the weighting procedure for the ACT Aspire norms. Tables 1.5 – 1.9 present the demographic information on the weighted samples for each grade and subject test.

Norm Tables and Summary Statistics

The norm table is defined as the cumulative percent of students scoring at or below a given score in the norm sample. A smoothing process was applied to the empirical cumulative percentages to reduce the sampling error and increase the precision of the norms. The norms tables are presented in Tables 1.10–1.14 for each subject respectively. The mean scale score values for students in each grade and subject test are given in Table 1.15. These represent estimated mean scores if all students in the target population (all U.S. elementary and secondary school students) were to take the test.

Figure 1.1: Conceptual diagram of chain-linked weighting strategy

Note: Variables used for weighting are included in boxes.
